Languages: Rust, Java, Ruby, C/C++, LUA, Racket, Shell. Java/Typescript, Python, and more...

Systems: UNIX, Linux, Git + Hub/Lab, Rails, Heroku, Postgres (PostGIS), SQLite, AVR/ARM, WoW (ask me about it).

Professional & Teaching Experience

- **Northeastern University** **Boston, MA**
Research Programmer, Intelligence Advanced Research Projects Activity, HECTOR *Aug. 2019 ~ May 2021*
 - Collaboratively developed a hybrid-mode secure programming language design for multi-party computation (MPC)
 - Represented my team at both remote and in-person technical exchange meetings with other researchers
 - Built a prototype implementation of our language, which is forked from the Rust programming language
 - Began a formalism for our language(s), which will include sound typing rules, and reductions

Teaching Assistant, Fundamentals of Computer Science 1 *Fall of 2012, 2013, 2014, and 2015*

 - Conducted short lectures before each lab and then lead the lab's students and tutors in the weekly assignments
 - Discovered new ways to present concepts that facilitated student understanding
 - Assisted students at established office hours and online
 - Participated and lead course administrative tasks, including grading, meta-grading, testing, rubric development, and weekly teaching staff meetings
- **Forward Financing Inc.** **Boston, MA**
Sr. Software Engineer *May 2018 – Aug. 2019*
 - Developed a client wrapper for an Algolia search implementation
 - Quickly performed various application performance improvements, often caused by unacceptable response times
 - Planned architecture refactoring, including object model improvements and a new data permissions system
 - Led efforts to create an orchestration CLI for managing a complex Heroku + Salesforce microservice system
 - Mentored co-op university students by providing deep code reviews and pair programming
- **HOMER Energy** **Boulder, CO**
Software Developer, Summer Intern *Jul. 2017 - Nov. 2017, Summer 2012*
 - Built API integrations for the HOMER C# application, including REST and CSV file APIs which involved a general refactoring of the code which imports data, complete with added tests
 - Developed an internal tool to view the Google Protocol Buffer used to pass values between all parts of the application allowing developers to quickly see inputs and outputs
 - Created a web-based frontend for HOMER in Rails, which served as the starting point for another version and provided a proof of concept for how to integrate the HOMER API with a webserver
- **Apple Inc.** **Cupertino, CA**
Software Engineer *Jan. 2015 – Aug. 2015, Jul. 2016 – Jul. 2017*
 - Built a Ruby library (**radic**) and CLI (**radish**) for interacting with Apple's bug management system (aka Radar)
 - Participated in a cross-cutting web design work group to help create common components for the hardware teams
 - Contributed to an internal tool for managing hardware validation, inspired in part by Travis CI
 - Contributed to an internal tool for analysing large amounts of pre-production device test data
- **Americas Test Kitchen** **Boston, MA**
Web Developer *Jan. 2014 – June 2014*
 - Pushed code to the frontend and backend for all four Americas Test Kitchen websites, including bug fixes and technical infrastructure upgrades
 - Built modularized components to abstract functionalities found common throughout the company's codebase
- **Bluesocket - Adtran** **Burlington, MA**
Software Developer *Jan. 2013 – June 2013*
 - Developed an automated build system, which reduced turnaround time by allowing anyone to easily run a build
 - Addressed user reported issues in Ruby/Rails and LUA, including hardening validations and updating database migrations for old versions of the software
 - Designed a class/model structure for users and accesspoints, which allowed the backend to represent clients of individual accesspoints

Other Interests: Microelectronics, Music, Woodworking, Billiards, Environmentalism, Travel & Culture, Gaming, Skiing, Frisbee, Cats, and much more ...

Boston, MA

2011 – 2016

- **Relevant Courses:** Programming Languages, Special Topics in Programming Languages, Compilers, GPU Programming & Architecture, Systems and Networks, Computer Organization, Software Development (aka HELL), Theory of Computation, Algorithms and Data Structures, Fundamentals of Computer Science 1 & 2, Object Oriented Design, Artificial Intelligence, Logic and Computation, Combinatorics.
- **Clubs & Extracurriculars:** Association for Computing Machinery, NU Hacks, Hack Beanpot.

<https://github.com/nixpulvis>

- **alacrity**, a cross-platform, GPU-accelerated terminal emulator (contributor)
- **oursh**, a multi-language shell which aims to be POSIX compatible, written in Rust
- **lalrpop-lambda**, parser and reductions for the lambda calculus with a minimal webapp
- **parser-combinator**, a Racket implementation of a recursive descent parser, used by students for a JSON lab
- **galos**, an Elite: Dangerous EDDN subscriber, (PostGIS) database, CLI, and GUI
- **nrf24l01**, basic working AVR firmware for the Nordic Semiconductor's nRF24L01+ radio transceiver
- **maze_gl**, a small maze generation and first person OpenGL game

[illegible]
