Languages: Ruby, Rust, C/C++, LUA, Racket, Shell. ECMAScript (JS), Python, Java, and more...

Systems: UNIX, Linux, Git + Hub/Lab, Rails, Heroku, Postgres, SQLite, AVR/ARM, WoW (ask me about it).

Professional Experience

- **Northeastern University** **Boston, MA**
Research Programmer, Intelligence Advanced Research Projects Activity, HECTOR *Aug. 2019 ~ May 2021*
 - Collaboratively developed a hybrid-mode secure programming language design for multi-party computation (MPC)
 - Represented my team, at both remote and in-person technical exchange meetings with other researchers
 - Built a prototype implementation of our language, which is forked from the Rust programming language
 - Began a formalism for our language(s), which will include sound typing rules, and reductions
- **Forward Financing Inc.** **Boston, MA**
Sr. Software Engineer *May 2018 – Aug. 2019*
 - Developed a client wrapper for an Algolia search implementation
 - Performed various application performance improvements, often caused by unacceptable response times, quickly
 - Planned architecture refactoring, including object model improvements, and a new data permissions system
 - Led efforts to create an orchestration CLI for managing a complex Heroku + Salesforce microservice system
 - Mentored the co-op university students by providing deep code reviews and pairing on problems
- **HOMER Energy** **Boulder, CO**
Software Developer, Summer Intern *Jul. 2017 - Nov. 2017, Summer 2012*
 - Built API integrations for the HOMER C# application, including REST and CSV file APIs, which involved a general refactoring of the code which imports data, complete with added tests
 - Developed an internal tool to view the Google Protocol Buffer used to pass values between all parts of the application, allowing developers to quickly see inputs and outputs
 - Created a web based front-end for HOMER in Rails, which served at the starting point for another version and provided a proof of concept for how to integrate the HOMER API with a webserver
- **Apple Inc.** **Cupertino, CA**
Software Engineer *Jan. 2015 – Aug. 2015, Jul. 2016 – Jul. 2017*
 - Built a Ruby library (**radic**) and CLI (**radish**) for interacting with Apple's bug management system (aka Radar)
 - Participated in a cross-cutting web design work group to help create common components for the hardware teams
 - Contributed to an internal tool for managing hardware validation, which was inspired in part by Travis CI
 - Contributed to another internal tool for analysing large amounts of pre-production device test data
- **Americas Test Kitchen** **Boston, MA**
Web Developer *Jan. 2014 – June 2014*
 - Pushed code to the front-end and back-end for all four Americas Test Kitchen websites, including bug fixes and technical infrastructure upgrades
 - Built modularized components to abstract functionalities found common throughout the company's codebase
- **Bluesocket - Adtran** **Burlington, MA**
Software Developer *Jan. 2013 – June 2013*
 - Developed an automated build system, which reduced turnaround time, allowing anyone to easily run a build
 - Addressed user reported issues in Ruby/Rails and LUA, including hardening validations and updating database migrations for old versions of the software
 - Designed a class/model structure for users and accesspoints, which allowed the back-end to represent clients of individual accesspoints
